A single source. A complete resource.

Got a Question?
We'll get the answer.
(Even if it doesn't lead to a sale)

The truth is, there are plenty of suppliers you can go to for industrial belting products, and many of them may have lower prices than Great Lakes Belting. But if you want more than just products—if you're looking for a partner that can optimize the performance, productivity and profitability of your belting application—GLB is the best choice you can make.

That's because we're totally focused on meeting each customer's unique needs. And that means providing a lot more than parts. We make it our job to ask the right questions, find the right answers, and develop the right solutions...long before we try to sell you anything. In fact, we'd rather pass up a sale than sell you something you don't need. Or that won't provide the best performance for your application.

You see, our goal is to build sustainable, long-term relationships by consistently delivering the highest possible value to our customers. In that way, we can both make the maximum contribution to each other's continued success.

Never been done before?

We'll probably be the first to do it. No two industrial belting applications are ever quite the same, even when the same customer is involved. So why do so many suppliers only offer standardized products and off-the-shelf solutions?

It's different at GLB. We concentrate on devising unique responses to unique situations. Whether it's creating a new belt design, or developing a complete system, we can engineer a specific solution that meets every requirement of virtually any application. In other words, we'll redesign our products – so you don't have to redesign your process.

To help you determine your precise needs, we offer free in-plant surveys and systems engineering services. We maintain extensive fabrication capabilities that allow us to produce what we design. And of course, we provide complete installation, service, and after-hours emergency response; everything that's needed to ensure your application runs as smoothly as possible, from start-up onwards.

So if anyone tells you, "it can't be done", come to GLB. Odds are we'll find a way to do it—and it will meet or exceed your expectations.

Can't find it anywhere else?

You'll probably find it here. Another reason why we do a better job meeting customer requirements is simply because we have a broader range of in-stock and available materials, products and equipment. As a result, we can provide you with exactly what you need to produce precisely the results you want. All at a very cost-effective price.

Thanks to partners and sources all over the world, we have access to virtually any conveyor, process or power transmission belt or conveyor material in use today. If it isn't already in stock, we can special order it and have it within days. Our in-house fabrication capabilities allows us to produce one-of-a-kind combinations you won't find anywhere else. And even though GLB product performance and quality is well worth waiting for, you won't have to: with all our contacts and in-house capabilities, we can assure fast deliveries and order turn around, even on the most unique customer orders.

Best of all, our production capabilities are so cost-effective, we can provide affordable custom materials and products on even the smallest scale – down to a single roll of belting. At GLB, small customers (and small orders) get the same kind of specialized service and attention that's usually reserved for only the biggest customers.

Want more than a low price?

We'll give you the greatest value — always.

In today's intensely competitive environment, there's constant pressure to seek out the lowest price. But true competitiveness is always based on value, on getting the most for your money.

That's why we encourage you to compare GLB with every other supplier. Evaluate our products and solutions in terms of design, quality, performance and durability – and our service for responsiveness, knowledge, skill and honesty.

When you do, we think you'll decide that Great Lakes Belting is the most valuable—and profitable — choice you can make.
